Policy Factors in Environmental & Energy Management

Course Description

EMSE 6200: This course introduces students to the issues, solutions, approaches, and responses that affect the regulated environmental and energy community in the U.S. The course approaches the relevant factors from the users' perspective rather than from the policy maker or enforcer's side. Topics of interest to users include: How environmental and energy laws are made, the EPA's compliance enforcement role, the goals of applicable laws and regulations, how the policy system works and how it might be improved, private governance and private-sector, consensus management standards, and trends on the horizon for next generation governance.

To register, go to the schedule of classes and select the Spring 2021 semester.
Select "Engr Mgt & Systems Engineering." Choose EMSE 6200.
